ANDROID

Android™ is the first free,  
open source, and fully  
customizable mobile  
platform.

Android™ delivers a complete  
set of software for mobile  
devices: an operating system,  
middleware and key mobile applications.

- First event of the day -> Set alarm wake up time
- Contact birthday -> Send birthday card
- Email received -> Autoreply based on status
- GPS location -> Set phone profile
- Message received -> Autoreply to sender based on status
- Message received -> Forward to sender based on status
- Set mood -> Choose music playlist
- Update profile on one app -> Update profile on others
- New song playing -> Update away message with current song
- Specific song plays -> Display associated content (i.e. a contact's photo)
- Get email from a contact -> Queue song associated with them
- GPS coordinate changes -> Present local listings for things of interest
- Alert on stock ticker app -> Send email to broker
- Update "Not Well" status -> Send notification to bosses/friends
- Endless possibilities...
